

HIGHLIGHTS

- Supports P8 Content Engine 3.x/4.x/5.x
- Dynamic document Indexing
- Database lookup / advanced operations through GUI and scripting
- Post committal index / DBMS operations
- Dynamic document security determination
- Dynamic document 'foldering'
- Provides image-only PDF renditioning
- Multithreading provides simultaneous committal of multiple documents across multiple document classes

SYSTEM REQUIREMENTS

- Quillix Server
- P8 COM Client (P8 3.x only)
- P8 .NET Web Services Client (P8 4.x and 5.x only)

MuWave® QSX for FileNet® P8

DESCRIPTION

MuWave® QSX for FileNet P8® is a Quillix™ Server eXtension module that provides integration with FileNet P8 enterprise content management systems. MuWave QSX for FileNet P8 is easy to install and configure yet flexible enough to provide sophisticated document processing in high volume environments.

This product provides the ability to seamlessly commit documents captured with the Quillix Capture Suite to the FileNet P8® repository . High volume processing is supported through multithreading, providing the ability to quickly, reliable and easily add documents and link Quillix Indexes to FileNet P8® properties for easy retrieval and compliance. This product can be implemented with a new or existing Quillix Capture system, please contact us for more information.

- Document committal to P8 Content Manager 3.x, 4.x, and 5.x
- Supports both image and universal files
- Provides image only PDF renditioning as a low cost way to store documents in the convenient PDF format
- Supports dynamic document and file naming prior to committal
- Post-Commit operation allows document class properties to be updated after document committal
- Full ODBC database support for indexing, post committal index updates, logging, or advanced database operations
- Support for repository folder structure. Folder path may be dynamically generated based on any available information
- Advanced versioning support, enabling incoming documents to be compared to existing versions
- Additional versioning options enable incoming pages to be appended to existing image and PDF files
- Dynamic security specification for documents based on any available information such as Quillix index values
- Optional database transaction capability including retry capability to ensure successful execution
- Integration with MuWave Reports and the other MuWave modules for a comprehensive capture solution

EASY CUSTOMIZATION OUT OF THE BOX

Configuration settings are specified using simple pull-down menus. Simply clicking a button converts the setting into an easily customized Visual Basic script. Both the pull-down menus and the advanced Visual Basic scripts provide access to all information in Quillix including all of the document and batch indexes, information about the server, dates, times, and other information. In addition, full database support is provided for easy database lookup and other tasks.

Contact UFC for a custom demo today.

HIGH VOLUME CAPTURE

MuWave QSX for FileNet P8 links your Quillix server to your FileNet document management system, creating a high volume capture and secure document management system. This QSX module is an off-the-shelf solution, installs quickly and can be operational within minutes.

Configuration consists of inserting the QSX onto a batch or document level workflow, selecting the object store, the document class, and then linking existing Quillix Indexes to FileNet P8 document class properties.
